care & maintenance

Surface:

Compazo concrete has a **permanent coating**, there is no need to annually apply sealers, wax or other coating products to this surface.

Cleaning:

Use Windex or other ammonia based cleaners.

We **do not** recommend liquid detergents, as many of them will leave a film on the surface that will show fingerprints and surface marks.

DO NOT USE ABRASIVE CLEANSERS.

Stains:

Use “Soft Scrub” or “Clorox Bleach” to remove tough stains.

Rust / Lime:

May be removed using commercially available specialty cleaners like “CLR” or “Duro Tub and Sink Jelly”.

Polish Tops:

We **do not** recommend using a wax or furniture polish on these tops, as they will show fingerprints and surface marks.

PREVENT SURFACE DAMAGE

Avoid prolonged contact with strong chemical solvents such as paint remover or fingernail polish remover.

Direct contact with hot combs or curling irons can damage the surface.
Use a protective hot pad to shield the area in use.

Hot water should be set in the medium range (130°F to 140°F max.)
